ABOUT ME

After graduating from the Chemical Engineering department in 2019, I combined my passion for music with my curiosity about the entrepreneurship and launched the Meet The Music app. During this process, in order to improve myself in the field of entrepreneurship, I participated in the University4Society entrepreneurship program and became a member of the Superstars team, and I also attended the "Fundamentals of Entrepreneurship" training organized by Draper University.

In the Meet The Music as a co-founder, we founded "MTM Yazılım Dijital Hizmetler A.Ş." by receiving seed investment from Demirhan Büyükcözü, one of the founders of V-Count, Onedio and Videodan, with Videodan and Onedio he had successfully exited. In this period I worked in various areas such as product development, growth, finance, user experience, developing and marketing.

With my interest and passion for software, I developed various projects using React, React Native, and Node.js technologies. In my own startup, the 'Meet The Music' app, I developed the admin dashboard part using React and coded some of the pages using React Native. With my eagerness for continuous learning, I continue my studies and know that I am flexible enough to quickly adapt and improve myself in learning a new technology.

JOB EXPERIENCE

PRODUCT MANAGER/CO-FOUNDER

MTM YAZILIM DİJİTAL HİZMETLER A.Ş. | 2019-2024

INTERN PLANT DESIGN ENGINEER

Sistemas Teknoloji | 2018 (1 Month)

INTERN PRODUCTION ENGINEER

Felda Iffco | 2017 (1 Month)

SKILLS

- HTML/CSS
- React
- Redux
- Tailwind
- React Native
- Node.JS
- Javascript
- Redux/Context
- MongoDB
- Marketing & Growth
- Product Management
- GraphQL
- Figma
- Typescript

PROJECTS

RHYTHM RADAR

Technology: React Native, Redux, Typescript, Rest API (Spotify APIs)
Rhythm Radar is an app that suggests songs and creates playlists according to your mood or preferences. It works with Spotify authentication. When you create a playlist in the app, it also creates and adds the selected songs to this list in Spotify as well.

PUBLICIC

Technology: React Native, Redux, Rest API (Google APIs)
Publicic is an app that you can log in with your Google account and lists the restaurants, pubs and cafes around you according to your location. The project has not been completed yet and the parts requiring great effort have been completed.

CHAT APP

Technology: React Native Expo, Socket io
Basic chat app with Expo and Socket.io

GETIR CLONE

Technology: React Native Expo, Redux, Typescript
A simple getir clone with Expo. The products are listed, added to the cart and the cart is displayed. Same UI coded.

EVENT ORGANIZER

Technology: React, GraphQL
A simple react application that displays events and adds events and participants. Query, Mutation and Subscription cases are available with GraphQL.

BOOKING APP

Technology: React, SCSS, Context, NodeJS, MongoDB, Express
A Full Stack hotel reservation application was created using nodejs and mongodb vs react and context api. You can register and log in to the site. You can view the hotels and apartments that are available on certain days from the calendar. You can also go to the admin page and add new hotels and listings.

WHATSAPP CLONE

Technology: React Native Expo, GraphQL, AWS Amplify
A whatsapp clone project. React native expo was prepared with graphql and aws amplify. It's nearing completion. Amplify sends you an email OTP to confirm your login.

REACT NATIVE OTP PROJECT

Technology: React Native, Typescript, Firebase, Google Cloud Functions, Twilio
A simple application where you can register and log in. Created for Twilio integration practice. While logging in, you receive SMS verification and if the code is entered correctly, you are logged in.
